Computational Analysis of Full-Length Mouse cDNAs Compared
Normalization and subtraction of cap-trapper-selected cDNAs to
prepare full-length cDNA libraries for rapid discovery of new
genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format
sequencing pipeline with 384 multicapillary sequencer. Genome Res.
10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA library was prepared and sequenced in Mouse Genome
Encyclopedia: real-time sequence clustering for construction of a
nonredundant cDNA library of Genome Res. 11 (2), 281-289 (2001)
CDNA library was prepared and sequenced in Mouse Genome
Encyclopedia real-time sequence Science Laboratory in Riken
Genomic Science and Science Emboratory in Riken

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                        NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as trus of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole senome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               COMMENT
                                                                                                                                                                                                          in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in his sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
Jackson, L., Jacob, L., Jiang, H., Johnson, B., Johnson, R., Jolivet, A., Karpathy, S., Kelly, S., Kelly, S., Khan, Z., King, L., Kovar, C., Kraft, C.L., Lebow, H., Levan, J., Levan, J., Liu, J., Liu, W., Liu, Y., Londoare, S., Longoare, S., Lopez, J., Lourseaged, H., Lozado, R. NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA.

Claim 12; 56pp + Sequence Listing; 56pp; German.

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'.CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on

```
ö
               oligomers, the degree of methylation is calculated. The method is used:
(1) for diagnosis and/or prognosis of side effects of therapeutic drugs
and of a wide range of diseases, e.g. cancer, disorders of the central
nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
particularly by detecting mutations or single nucleotide polymorphisms
(SNP's); and (ii) for differentiation of single nucleotide polymorphisms
status of many of residues to be determined simultaneously. ABO31410-
ABO54121 represent genomic DNA sequences used to illustrate the method
for determining the degree of cytosine methylation described in the
of labels hybridised to the two classes of

diagnosis and prognosis, con from chemically treated DNA.

Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CyG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligomotectides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs

```
The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from one of 546 sequences, and an oligomer, in particular an oligomicleotide or peptide nucleic acid (RNA) -Oligomer that hybridises to or is identical transcription. The set of oligomer probes are useful for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) in a chemically pretreated genemic DNA. The nucleic acids are useful for diagnosing or treating diseases associated with DNA transcription (particularly with the methylation stated), e.g. adenosine deaminase deficiency, viral infection, retroviral infection, Sezary syndrome, haematological disorders, immunological disorders, Werner syndrome,

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid teukaemia, Alzheimer's disease, Alzh. epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                    ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, immune system disease; cytosine methylation, antiasthmatic; antianteriosclerotic; antianaemic; cytostatic; noctropic; neuroprotective; anti-HIV; anticonvulsant; opthhalmological; antithemmatic; antiatic; antidiabetic; antipsoriatic; antiinflammatory; cancer; eye disease; arteriosclerosis; anaemia; acute myeloid leukaemia; Alzheimer's disease; AIDS; epilepsy; neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease; gene;

The polymucleotide sequences given in AAG99918 to AAC99977 encode the human secreted proteins given in AAB56077 to AAB56362. Human secreted proteins given in AAB56077 to AAB56362. Human secreted proteins given in AAB56077 to AAB56362. Human secreted concerned and proteins bave activities include: immunosuppressive; expressed in. Examples of activities include: immunosuppressive; cardiant; antinheumatic; antiproliferative; cytostatic; cardiant; concerned; antipactective; noctropic; neuroprotective; antibacterial; cytoride; fungicide; and opthalmalogical. The human secreted oplymucleotides and proteins can be used to prevent treat or ameliorate concerned; and proteins can be used to prevent treat or ameliorate condition or susceptibility to a pathological condition. Disorders which condition or susceptibility to a pathological condition. Disorders which care dispanced or treated include autoimmume diseases e.g. rheumatoid architeratis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular constructs e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzhelmer's disease, infections caused by bacteria, viruses and conjar disorders e.g. corneal infection. The proteins can also be used to aid wound healing and epithalial cell proliferation, to prevent skin adjing due to sunburn, to maintain organs before
                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated nucleic acid molecule encoding a human secreted protein is used in preventing, treating or ameliorating a medical condition.

The polymucleotide sequence given in AAB78381 to AAB78432 encode the human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins pave activitities based on the tissues and cells the genes are expressed in Examples of activities include: cytostatic; antianaemic; antidabetic; antinflammatory; ophthalmological; antirheumatic; antidathritic; antipsoriatic; antimicrobial and antiparkinsonian. Human secreted protein polymucleotides, polypeptides, antigonists and/or agoniets may be useful in treating, preventing, and/or diagnosing other disorders of the immune system; (c) angiogenesis disorders; (d) disorders of the immune system; (c) angiogenesis disorders; (f) diseases hyperproliferative disorders; (e) cardiovascular disorders; (f) diseases associated with increase apoptosis; (g) neurological diseases; (f) infectious diseases. They are also used to promote wound healing.

nephritis or Crohn's disease), respiratory disorders (e.g. asthma and allergy), cancers (e.g. gastric, ovarian or lung cancer), CRR disorders (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative disorders (e.g. parkinson's disease) and controllated disorders (e.g. atherosolerosis or mylocarditis). The polynuclectides are useful for chromosome identification, chromosome mapping, for controlling gene expression through triple helix formation or ranisense DNA or RNA, in gene therapy, for identifying individuals or rome some bnA or RNA, in gene therapy, for identifying individuals or probes. The polypeptides are useful for as molecular weight markers on probes. The polypeptides are useful for as molecular weight markers on sodium dodeory sulface-polyacrylamide gel electrophoresis (SDS-PAGE) gels, to raise antibodies, for testing biological activities, and for treating or preventing neural disorders, immune system disorders, remain, proliferative and/or cancerous diseases. This sequence corresponds to a gene encoding one of the polypeptide of the invention. Note: The sequence data for this patent did form part of the printed specification, but was obtained in electronic format directly from WIPO at the polypeptide of the printed specification, while the polypeptide of the printed at the printed at sequence data for the polypeptide of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; secreted protein; cancer; hyperproliferative disorder; rheumatoid arthritis; autoimmune disorder; haematopoietic disorder; anaemia; allergic reaction; asthma; cardiovascular disorder; wound healing; cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention relates to a novel human secreted polypeptide comprising a defined sequence given in the specification. The polypeptide, nucleic acid molecule, antibody, agonist or antagonist of the invention may be useful for preparing a composition for diagnosing or treating a haemopoietic or haematologic disorder such as anaemia, autoimmune a flasorders such as rheumatold arthritis, inflammation, Grave's disease, disorders including Parkinson's disease and Alzheimer's neurodegenerative disorders including Parkinson's disease and Alzheimer's disease, wounds and hyperproliferative disorders including atherosclerosis or cancer, as well as bacterial, viral, fungal or parasitic infections. The polypeptide may also be used during gene the polypeptide with a binding partner and determining whether the binding partner increases or decreases the activity of the polypeptide. The current sequence is that of the human secreted protein-related DNA of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   - NOD-8
   The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH5081, whose sequence was determined by the technique of SBH (sequencing by Mybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The mucleic acid sequences or result in diagnostics as expressed sequence tags (EST) for are useful in diagnostics as expressed sequence tags (EST) for informations, in assessing biodiversities, or in identifying mutations, in forensics, in assessing biodiversities, or in identifying mutations in formations are also useful as Mybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data contained in electronic format directly from USPTO at sequence thin patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.
                               New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hybridisation assay; genetic mapping; gene expression control; protein identification; signal transduction pathway; metabolic; pathway; promoter; termination sequence; corn; ss.

(I) have cytostatic activity and can be used in vaccine production. (I) can be used for stimulating and/or expanding T cells specific for a tumour protein on conteact with the T cells. They are also useful for inhibiting the development of cancer in a patient. (I) can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated colon tumor polynucleotide differentially expressed in colon tumor or colon metastatic tumor and polypeptides encoded by them, useful for inhibiting development of cancer in patient.

US-08-910-42LB-1.

Patent No. 6503729

GENERAL INFORMATION:

TITLE OF INVENTION: Complete Genome Sequence of the Methanogenic Archaeon, Methanocon

Patent No. 6503729

TITLE OF INVENTION: Complete Genome Sequence of the Methanogenic Archaeon, Methanocon

PATENTE OF INVENTION: Jannaschii

FILE REFERENCE: PRIONE: PAZ-08-22

CURRENT APPLICATION NUMBER: US 60/024,428

PRIOR FILING DATE: 1996-08-22

NUMBER OF SEQ ID NOS: 3

SOFTWARE: Patentin version 3.1

SEQ ID NO 1

LENGTH: 1664976

TYPE: DNA

ORGANISM: Methanococcus jannaschii

FEATURE:

NAME/KEY: misc feature

LOCATION: (2822)

OTHER INFORMATION: n equals a, t, c, or g

NAME/KEY: misc feature

LOCATION: (2825): (2825)

OTHER INFORMATION: n equals a, t, c, or g

NAME/KEY: misc feature

LOCATION: (84773)

OTHER INFORMATION: n equals a, t, c, or g

NAME/KEY: misc feature

LOCATION: (84773): (84773)

OTHER INFORMATION: n equals a, t, c, or g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ô

Patent No. 6087150
GENERAL INFORMATION:
TITLE OF INVENTION: Interleukin-1 Beta Converting Enzyme
TITLE OF INVENTION: Like Apoptosis Protease 3 and 4
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: Human Genome Sciences, Inc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 257422, Application US/10027632

Publication No. US2003020407589

GENERAL INFORMATION:
APPLICANT: Wang, David G.
TITLE OF INVENTION: Identification and Mapping of Single Nucleotide
TITLE OF INVENTION: Identification and Mapping of Single Nucleotide
TITLE OF INVENTION: Polymorphisms in the Human Genome
FILE REFERENCE: 108827.129
CURRENT APPLICATION UNMER: US/10/027,632
CURRENT APPLICATION NUMBER: US 60/218,006

Anote="Corgan: Bud, Vector: pDNR; Site_1: Sfi1; Site_2: Sfi1; CABUD is a cDNA library of Vitis vinitera cv. 'Cabernet Sauvignon' Clone 8 dissected buds. Samples were collected May 13, 2002 from pre-bloom plants (10-11 days before bloom). pre-veraison. Sampled vines were collected bud; Samples (Collected Doom), pre-veraison. Sampled vines were located at the University of California, Davis, Experimental

```
clone is among a rearrayed set of 15,247 clones from 11 embryo cDNA libraries (including preimplantation stage embryos cDNA libraries (including preimplantation stage embryos including embryos; embryos; extraembryonic part of B7.5 embryos, and E12.5 female mesonephros/gonad) and one newborn ovary CDNA library. Average insert size 1.5 kb. A11 source libraries are cloned unidirectionally with Oligo (dT)-Not primers. References include: (1) Genome-wide expression profiling of mid-gestation placenta and embryo using a 15,000 mouse developmental CDNA microarray, 2000, Proc. Natl. Acad. Sci. Shiraki,T., Tagami,M., Waki,K., Watahiki,A., Muramatsu,M. and Hayashizaki,Y. Direct Submission
Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequence Mam. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .
